Detail-oriented and enthusiastic **product leader with 9+ years** of experience as a engineer, business analyst and technical product manager. Transitioned from software development with a goal to combine my technical, prioritization and interpersonal skills for bridging the gap between business and IT. Currently also deepening my knowledge in AI, focusing on both technical foundations and practical applications (Agentic AI, RAG).

PROFESSIONAL EXPERIENCE

Zeal Network SE (Lotto24), Hamburg, Germany

2023 – Present

Technical Product Manager in Core unit, Player Account Management team

- Part of newly formed backend team focusing on development and delivery of a comprehensive suite of business-critical backend services and APIs
- Specialized in KYC and player-account lifecycle flows, with an emphasis on secure data handling, duplicate prevention, and robust integrations via scalable backend services/APIs
- Owning architectural direction for scalable backend APIs and integration flows, combining requirements engineering and feature discovery to deliver secure, high-performance services that simplify integrations for internal B2B teams and shorten time-to-market
- Led the creation of functional documentation for all company Core services, improving transparency and making workflows easier to discover and understand for variety of stakeholders
- Driving the full enablement of Responsible Gambling across the company, including discovery, engine design, and implementation of customer-facing interventions using internal and 3rd party AI and machine learning solutions

ABOUT YOU SE & Co. KG, Hamburg, Germany

2021 – 2023

Technical Product Manager in B2B unit SCAYLE commerce engine

- Leading multiple teams (circles) of BE developers, focused on Middleware product used for tenants connection to internal systems and all tenant specific integrations
- Supported product decisions by translating business priorities into practical backend architecture choices, with attention to code behavior and platform observability
- Launched high-impact integration projects for leading eCommerce shops like FC Bayern Munich, s.Oliver, Tom Tailor, Deichmann, Fielmann.
- Introduced and implemented unified monitoring and logging via Datadog for all the tenant solutions - doubling visibility and minimizing time-to-intervention through earlier issue detection

Integrated Business Systems IPS - Remaris, Zagreb, Croatia

2019 – 2021

Business analyst in development department

- Part of engineering team in charge of Point of sale (POS) software products portfolio: Self ordering kiosks, smartphone ordering systems and third party integrations
- Performed quality assurance, system integration and user acceptance testing in development and delivery of first customizable Self-service kiosk in southeast Europe
- Product manager on projects for mobile applications Leggiero stars club, Burger King Croatia and Batak loyalty
- Gathered requirements and drove the technical aspect of the project which led to company expansion on three new markets (Slovenia, Bosnia, Montenegro) within one year

System engineer in ERP and billing department

- Wrote and maintained custom scripts and workflows for increasing system efficiency and lower human intervention time on tasks
- In charge of analysis, monitoring and improvements of company's big data solution by using BI tools and Oracle PL/SQL
- Optimized business and operating processes to ensure safe flow of monthly invoice processing both for fixed-line and mobile services
- Installed, configured and tested company applications and system management tools

EDUCATION

Faculty of engineering, Rijeka, Croatia

Master of Computer Engineering

2017

- Graduated Cum Laude (Top 20%)
- Member of Autonomous Perception and Artificial Systems Laboratory
- Master Thesis "Photogrammetry in Real Time"
- Publication "Secure Operations as Congestion Control Mechanism Within OpenStack Based Cloud Laboratory" - International Conference on Smart Systems and Technologies, Osijek 2016.

Bachelor of Computer Engineering

2015

- Co-Founder of student project "RITEH UAV Team"
- Bachelor Thesis "Design and testing of new methods for interaction with an unmanned aerial vehicle based on smartwatch and smartphone usage"
- Publication "On the current state of UAV safety and regulations" - International Conference on Innovative Technologies in Safety Engineering, Rijeka 2015

SKILLS & OTHER

- Strong Agile/SDLC experience, centered on building and evolving backend-heavy products with APIs and complex integrations
- Comfortable analyzing solution architectures, complex business/technical processes, and code to identify impacts and dependencies
- Advanced knowledge of SQL and AWS services, familiar with coding (PHP, Java, Python)
- Certified in Datadog APM & Distributed tracking and Log management. Also, with extensive experience in other observability and monitoring tools like Splunk and Grafana.
- Solid grasp of the fundamentals and principles behind modern AI, including LLMs, RAG, MCP servers, agentic systems, and generative AI.
- My current hobby project - <https://github.com/domagojpoljancic/LinguAI> . AI-infused language learning iOS app built with Cursor and agentic workflows in LangGraph.
